Take on the challenge with our BIM modelers together !

BUILD PREP, PREFAB, AND EFFICIENCY

Tergooi Hospital, Hilversum

The Customer's Perspective

BAM Bouw & Techniek was awarded the contract to build the brand-new Tergooi Hospital in Hilversum. Through a careful tender process, they selected the right subcontractors and suppliers to match the project. One of them was Van Walraven. From the very first drawing, they were invited to take a seat at the table—bringing added value to the project's **build preparation, prefab, and efficiency.**

JEROEN AARTSE - EXECUTION MANAGER, SPECIAL PROJECTS, BAM BOUW & TECHNIEK

"For the Tergooi Hospital, Van Walraven came out on top in the tender, and we decided to partner with them," Jeroen Aartse begins. He's an execution manager for Special Projects at BAM Construction & Engineering, and in that role he's responsible for tendering work to subcontractors and suppliers. "And it paid off. Van Walraven has absolutely delivered on the preferred position they earned through the tender," Jeroen continues. "This was a huge job for a mid-sized company like theirs, but they definitely did what they promised."

Mistake today? Fixed tomorrow!

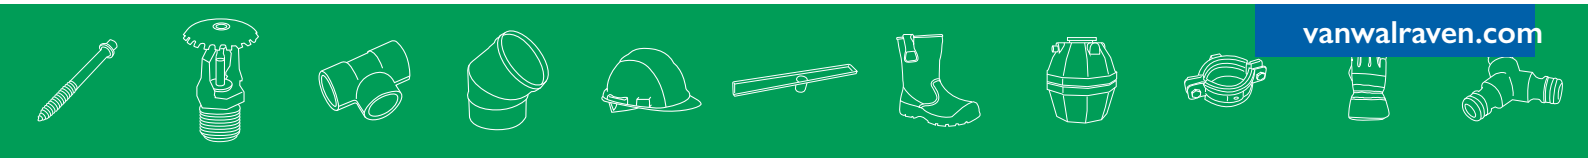

BAMvalues Van Walraven's flexibility mostof all."Van Walraven keeps the lines short,which means they can act quickly," Jeroen continues. "When needed, they could arrange something urgent right away. If our fitters or installers made a small mistake today, it could be corrected immediately. That makes working together incredibly smooth."

BAM also really appreciates Van Walraven's complete offering. "They truly have everything under one roof!" Jeroen says enthusiastically. "I find that forward-thinking, from a full range of products to prefabrication of bracket sets, and from sprinkler systems to everything in construction logistics. It's all taken care of."

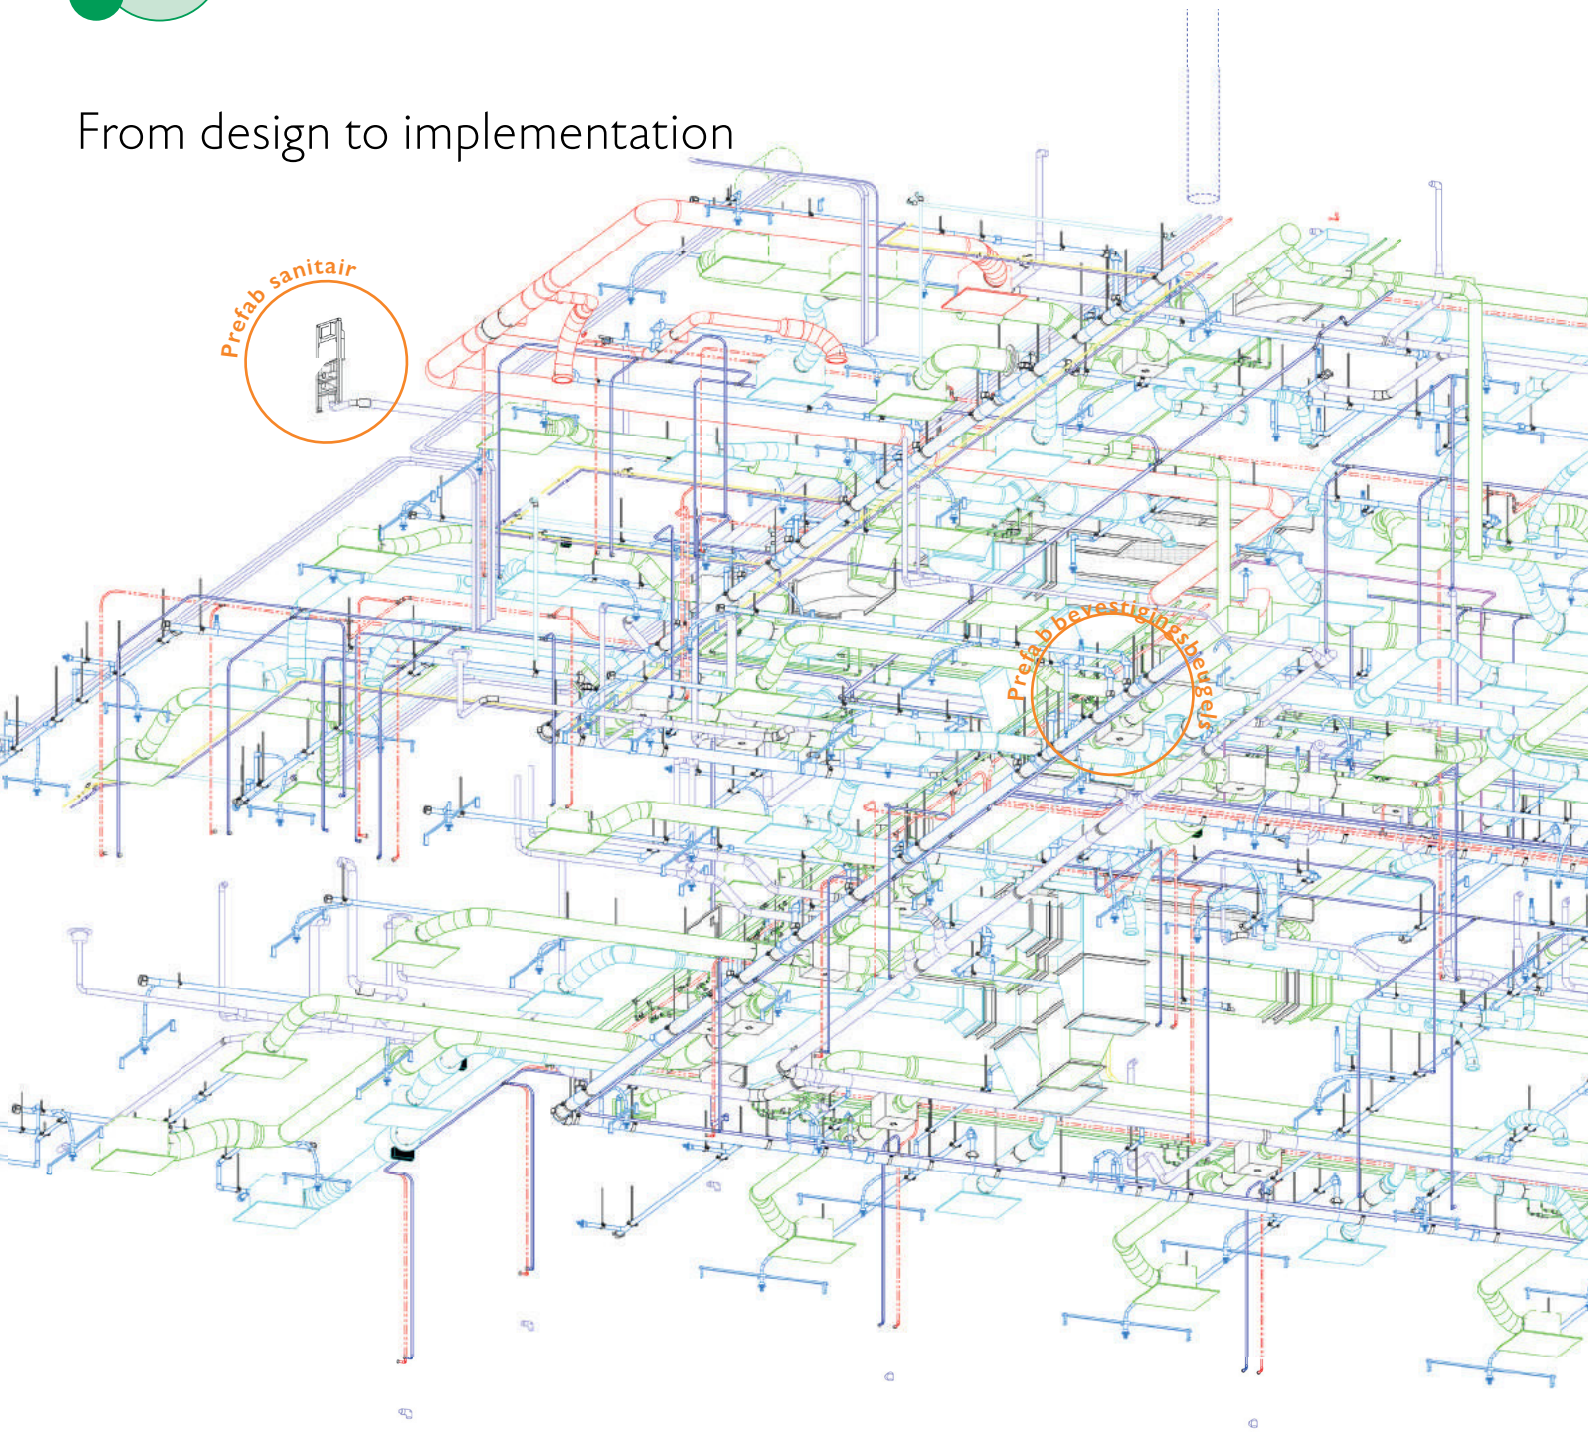

Finally, Jeroen also values the wholesaler's mindset. "This assignment was definitely a challenge, because it was a very large project," he says. "Even so, they delivered an excellent result; they do what they say they'll do, and if something isn't possible, they'll tell you. That's the kind of partner you can really do business with. We've been very pleasantly surprised, in any case."

"Anyone can supply products—we deliver solutions."

From design to implementation

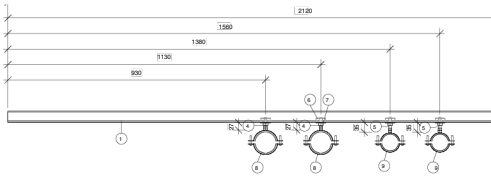

Prefab sanitair

Our prefabrication department has implemented efficiency improvements for Tergooi Hospital regarding the installation and finishing of the plumbing fixtures. All faucets and traps were pre-assembled at the sink, the seat and lid were pre-installed on the toilet, the mounting hooks were attached to the mirrors, and the assistive supports for the accessible toilets were pre-assembled and delivered as a complete unit. This way, the installer only needs to install the plumbing fixtures. Quick and easy!

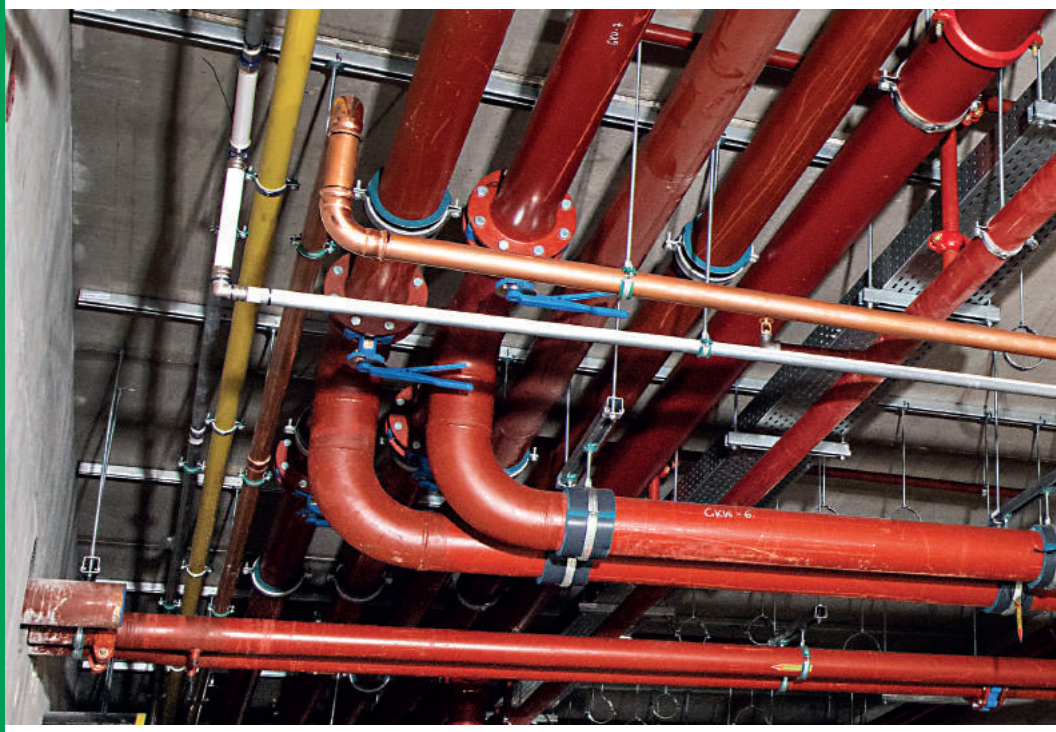

Prefab mounting brackets

All the bracket sets for the Tergooi Hospital were prefabricated in our own factory. Prior to that, a structural analysis was performed for the required piping. Using the 3D model, we planned in advance which bracket sets would be needed and where they should be positioned. This allowed these bracket sets to be quickly and easily installed in the correct locations once on-site.

Since 1968, we've been the wholesale supplier for infrastructure and installation products.

Our product range is broad and versatile. Our products are suited for residential and commercial construction, as well as civil works and industry. With more than 60,000 products, 40,000 m2 of space and 13 locations, we ensure an optimal, well-rounded inventory.
We go the extra mile Have a project? We can take the load off your shoulders. From the drawings through execution, we're happy to think along with you. With our logistics services, rental options, and prefab solutions, we support your project wherever needed.

We're also happy to advise you on technical questions—such as ease of installation, fire protection, sprinkler systems, sound insulation, maximum load, or capacity calculations.

We like to give you peace of mind, so you're never caught off guard.

Not just products solutions

Anyone can supply products we deliver solutions. That's our mindset. How can we **prefab or develop products so you save time on the jobsite and work more efficiently?** How else can we help? Need tools? Looking for a mobile warehouse? Fast product delivery? Van Walraven helps think through every solution. That's what sets us apart.

One-stop shop

For the construction of the Tergooi Hospital, we acting as a full-service supplier in infrastructure and building services provided all piping for sewers and water supply, accessories for the HVAC system, sanitary fixtures, and all hoses and components for the sprinkler systems. Everything under one roof that's why Van Walraven is the one-stop shop.

Just-in-time delivery

Jobsites are always crowded and busy and tasks have to be completed in the right order. That's why it's not ideal for materials and parts to sit on-site for long periods. It increases the risk of damage or items getting lost. As a solution, we offer our own logistics service, enabling true just-in-time delivery. Need the order on-site at 7:00 a.m.? We'll make it happen! Prefer 6:30 a.m.? No problem. That's exactly how we supported the Tergooi Hospital project—always just in time!

Corporate Social Responsibility

Unpacking products always takes a lot of time and it creates multiple waste streams that then need to be stored somewhere. In short, it takes time and space, and it's not ideal. That's why, for the Tergooi Hospital project, we unpacked items in advance whenever possible and delivered them to the jobsite without packaging. This way **installers and contractors can work far more efficiently and save valuable time. No more unboxing, immediate installation, and no return flow.**
