RELIEVE PRESSURE, INSPECT & CLEAR BLOCKAGES

Relief Chambers

Versatile, made to measure

When rainwater is handled using full-siphon systems, installing a relief manhole is required and mandatory.

Relief Pit400 mm

Item No.: 155189

Manhole Cover

Item No.: 131035

Relief Pit 630mm

Available upon request

Adjusting Ring/Foundation Plate Item No.: 131158 Relief Pit Cover Item No.: 131172

Inspection

Relief pits can also be used as inspection chambers when checking a home connection.

Unclogging

Thanks to quick access to the pipes, unclogging and preventive cleaning can be done easily without digging and without disruption inside the home. There's no risk of wastewater backing up into the house.

Built-in odor trap

Relief pits come with a built-in odor trap, specially designed for both sanitary and storm sewer lines. They also include a leaf catcher, making it easy to clean from the top.

How it works

With a suitable grate cover, rainwater can drain away at ground level if the sewer is full or blocked. This helps ensure the stormwater drainage system keeps working properly at all times.
