Traffic & Safety

When roadwork is underway, it goes without saying it needs to be done safely. We supply a wide range of traffic control equipment and signage for the job.

Whether you need signage for public spaces, custom traffic signs, site layout solutions, or street furniture, our sales specialists are happy to advise you on the options.

Barricade Products

For setting up parking areas, shoulders, roads, and events, we offer a range of solutions. Come to us for items like barricade fencing, crowd-control barriers, traffic cones, safety mesh, and barriers.

Traffic control products are the ideal way to clearly show that a specific area is (temporarily) closed and/or restricted.

Our barricade products can be customized with your logo and ordered in any color you need. Crowd-control barriers can also double as an eye-catcher at your event when paired with banners —such as sponsor or directional banners, or fabric panels to help set the mood.

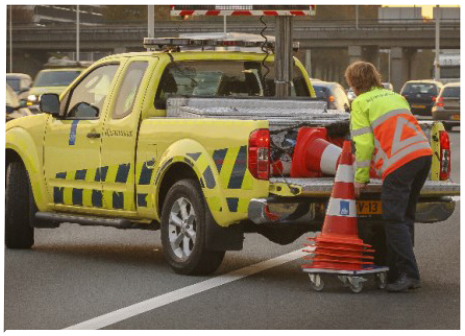

Temporary fencing

Temporary fencing is the ideal solution for quickly and safely closing off small areas such as walkways and markets. Lightweight and easy to stack thanks to the rotating feet. Finished with reflective red-and-white sheeting. Connects easily using convenient, molded coupling hinges. Fits into beacon bases. Size: H = 1 m, W = 2 m. Available in all colors and versions upon request; standard color is white. Total weight only 19 kg!

Galvanized Steel Crowd-Control Barrier

Keep crowds moving smoothly with these ultra-strong crowd-control barriers. Made from galvanized steel with a hook connection and replaceable feet. Outer tube Ø32 mm and bars Ø16 mm. Dimensions: 2000 x 1000 mm, with 13 bars.

PVC Traffic Cone

One-piece, long-lasting PVC traffic cone with full Class 2 reflective sheeting. BAS tested and approved to TL-Cone 94 and DIN EN 13422. Stacks perfectly.

Plastic Barrier Mesh

Plastic safety barrier mesh for cordoning off trenches, work pits, and more—quick and easy to use, and lightweight. The matching hanging pin ensures fast, secure installation.

Plastic barrier

These plastic barriers are ideal for cordoning off areas. They link together to create a clear, continuous separation for closing off a zone. Includes a water fill opening and a practical push-fit connection. Length 1000 mm, height 500 mm. Available in red and white.

Signage

Signage is essential for maintaining safety.

Clear information in every situation is vital for road safety and smooth traffic flow. We supply traffic signs that meet all applicable laws and standards (NEN-EN 12899). These signs fall under the 1990 Traffic Signs and Regulations (RVV 1990), which—together with several other regulations and provisions—form part of the 1994 Road Traffic Act. We also provide supplemental plates, temporary signage, signposts, and clamps.

Speed Bumps

Cable Ramps

Cable ramps, also known as hose ramps, are ideal cable protectors. Heavy vehicles can drive right over them without damaging the cables. Perfect for protecting cables and lines on construction sites and/or at events. Available in multiple styles.

Speed Bumps

The semi-permanent solution for managing lower speeds. The steep ramp keeps drivers from taking this bump at full speed. Easy-to-connect modular sections. Includes 2 reflectors per side. Made from recycled plastic. Both the black and yellow versions are solid-color throughout. Weight per meter (30 mm high) = approx. 13.5 kg. Recommended drive-over speed for the 30 mm bump = 30 km/h. Other heights available upon request.

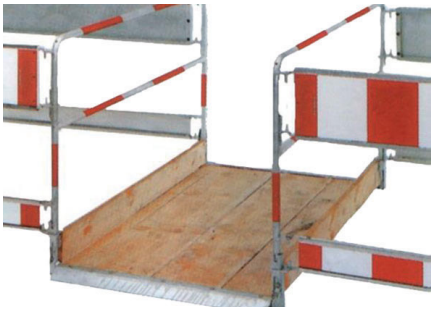

Bridges

Plastic Pedestrian Walkway with Guardrails

A walkway designed to easily guide pedestrians around construction sites. Lightweight, plastic non-slip deck with convenient carry handles. Metal handrails are easy to remove. Equipped with reflective film. Supports loads up to 1 ton. Can be quickly widened by inserting an extra section (element).

Dimensions: 1,700 x 1,000 mm (deck plate). Width between installed handrails: 860 mm. Weighs only 20 kg. Complies with DIN 4420-1.

Wooden Pedestrian Walkway with Ramp and Guardrails

The ideal walkway for pedestrians and wheelchair users. 2200 x 1100 x 105 mm and 2700 x 1100 x 105 mm (LxWxH). Specially designed for wider cable trenches.

Signage

Marker board with base

Plastic marker board with double-sided reflective film, pointing left/right. The standard base is a 60 x 60 mm square. Reinforcement tube available on request.

Warning light

Double-sided illuminated LED light. 180 mm.

Marking & barrier tape

For cordoning off restricted and hazardous areas, routes, and events. Available in multiple versions, such as marking tape for gas and water lines.

For questions and advice on barricade materials and signage, you can always reach our infrastructure specialists at infra@vanwalraven.com, vanwalraven.com, or call +31(0)297 300 000.
