Drainage with channel drains

For the discharge of rainwater and wastewater containing harmful substances, Van Walraven offers an extensive channel drain programme from ACO and Hauraton.

ACO

The ACO Group stands worldwide for quality, experience, and innovation in drainage technology. ACO is a specialist in line drainage. At Van Walraven you will find, among others, the Multiline and EasyGarden series.

Hauraton

With Hauraton products, various drainage concepts can be realised. Seven different widths, construction lengths up to 2 metres, and a wide choice of covers provide virtually unlimited application possibilities.

For all load classes

We supply channels with load class A through F.

NEN-EN 1433

	Class A 15	Areas used exclusively by pedestrians or cyclists.
	Class B 125	Sidewalks, pedestrian zones, private parking areas, and parking lots for passenger cars.
	Class C 250	Gutters located next to curbs in streets, residential areas, and workshops.
	Class D 400	Public roads and parking areas with dynamic loads (also when used by loading and unloading vehicles).
	Class E 600	Traffic areas with particularly high axle loads, such as industrial zones.
	Class E 600	Infrastructure at airports, military bases, container terminals, etc., with extremely high wheel loads.
	Class F 900	Infrastructure at airports, military bases, container terminals, etc., with extremely high wheel loads.
